

Communication Survival Kit

CAPABILITIES

Even with no infrastructure, OODAKits enable individuals and small teams to quickly, securely, and simultaneously:

- Access the Internet
- Email
- Share critical data
- Make phone calls
- Use cell phones
- Text message
- Voice and video chat
- Connect to a VPN
- Fax

KEY BENEFITS

- Assured connectivity
- Highly portable
- Reliable coverage
- Self-powering
- Global access
- Simple to use
- Free local access

APPLICATIONS ENABLED

- Email
- Text messaging
- Voice calls
- Skype, Google Talk, Yahoo! Messenger, iChat, more
- Data and video sharing
- VPN access
- Video streaming
- Video conferencing

In remote areas and during emergencies, traditional wireless and broadband networks either don't exist or become disabled. People often get disconnected—unable to communicate, share critical data, or call for help.

The self-powering and carry-on sized OODAKit™ solves this lingering problem. It gives individuals and small teams worldwide phone, email, and Internet access – even when there's no power, phone service, or broadband coverage.

OODAKits access a global satellite network so people can communicate no matter where they are or what's happening there.

FULLY INTEGRATED SOLUTION FOR IMMEDIATE CONNECTIVITY

Rugged TSA-Approved Carry-On Case—Built for harsh environments and demanding travel, the kit's durable, watertight roller case houses all kit components. The case meets TSA requirements as an airplane carry-on, easily fitting in overhead bins and weighing 37 pounds.

Broadband Satellite—When terrestrial networks aren't available, the OODAKit accesses a global satellite broadband network powered by Inmarsat BGAN (data rates up to 464kbps). After a 5-minute setup, users can make calls and share data even when traditional wireless and broadband services aren't available.

Long-Range Phones—Rugged cordless phones enable reliable worldwide calling regardless of local network availability. Coverage is rated at 3,000 acres, 250,000 sq. ft. inside, and up 12 stories in-building. Free local handset-to-handset calling, broadcasting, and text messaging are simultaneously supported. Standard OODAKit includes 4 handsets (up to 9 are supported and are available options).

Failsafe Wireless Router—A high-performance wireless router provides secure local Wi-Fi access. Supporting USB and ExpressCard cellular modems, it will seek out existing EVDO/3G/4G networks or use the satellite network when needed.

Self-Contained Power—On a single charge, the OODAKit will run in full standby mode for 18 to 20 hours, and will support usage for 6 to 8 hours depending on activity. The integrated solar panel and multiple connections for local power sources (e.g., generators, vehicles, and fuel cells) extend run-time. End-user devices with 12V or USB chargers can be simultaneously charged while the kit is running.

APPLICATIONS

PRIVATE SECTOR

- Business continuity
- Facility security
- News broadcasting
- Site surveillance
- School safety
- Mining operations
- Energy exploration
- Remote construction
- Utility field response
- Remote field operations

PUBLIC SAFETY

- Emergency response
- Incident command
- Global disaster relief
- Rural search and rescue
- Border patrol
- Law enforcement
- Surveillance
- Pre-planned events

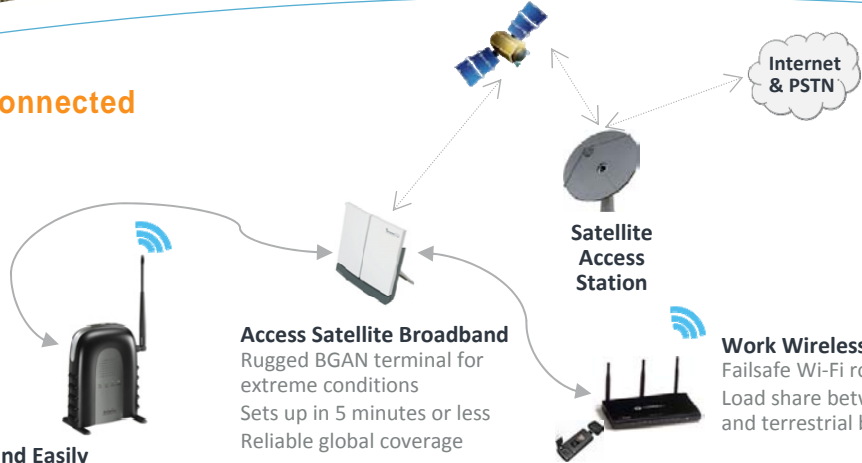

USER DEVICES ENABLED

- Hybrid Wi-Fi/UMA phones (i.e., Blackberry)
- GSM phones
- EVDO/3G modem cards
- VoIP/SIP phones
- Laptops
- Wireless printers
- Fax machines

SUPPORT

- Extended warranties
- Web-based training
- 24x7 support options

Stay Connected

Access Satellite Broadband
 Rugged BGAN terminal for extreme conditions
 Sets up in 5 minutes or less
 Reliable global coverage

Work Wirelessly
 Failsafe Wi-Fi router
 Load share between satellite and terrestrial broadband

Call Quickly and Easily
 Powerful long-range phone system
 Free local handset-to-handset calling
 Text and broadcast modes
 4 handsets included; options for more

Take Your Network Anywhere
 Carry-on roller case for easy travel
 Rugged design for harsh environments
 Total weight: 37 pounds

Power Everything
 18-20 hours standby
 8-12 hours run-time
 12V power supply
 Charge kit and end-user devices
 Integrated 62W solar panel
 Connections for vehicles, generators and shore power

Support OODAKIT and End-User Devices
 Use wireless network
 Talk, chat, email, share
 Make calls with Wi-Fi phones

- AVAILABLE OPTIONS**
- Competitive Airtime Plans
 - Video Streaming/Conferencing
 - VoIP and Application Server
 - On-the-Move Vehicle Kits
 - Higher-Capacity Power
 - Multi-Line Phone Systems
 - Additional Rugged Handsets
 - Pre-Configured Cell Phones
 - GSM/CDMA Picocells
 - Encryption

Global Always-On Coverage

OODAKITs leverage the power of Inmarsat's Broadband Global Area Network (BGAN) for worldwide coverage.

A small, woman-owned business.
